

I am writing to express my concerns regarding a proposed ban on GMO grass. As we know GMO's are still in their infancy and the long term effects are still unknown. Making a grass that can withstand roundup does not promote soil ecology, and leads to toxic lifeless soil. The over usage of roundup and synthetic fertilizers have been linked to cancer, tumors, and leukemia. So why would we want to increase their usage? Lawns are supposed to be a place where people can sit, lay and have fun without the fear of being exposed to potentially harmful toxins. GM grass is no different and in my opinion it's asking for irreparable consequences. As a citizen of Connecticut and the U.S. I am against GMO's of any kind and feel that it is not a good direction for our State, and country.

Best Regards,
Chris Elliott
